### **DETAILED ACTION**

#### Election/Restrictions

1. Applicant's election of group I in the reply filed on 9/27/04 is acknowledged.

Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

## Claim Objections

2. Claims 5 and 6 are objected to under 37 CFR 1.75(c), as being of improper dependent form for failing to further limit the subject matter of a previous claim.

Applicant is required to cancel the claim(s), or amend the claim(s) to place the claim(s) in proper dependent form, or rewrite the claim(s) in independent form. Specifically claims 5 and 6 claim method steps (i.e. one layer is deposited before another), and such steps are not given patentable weight in device claims.

# Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States

Application/Control Number: 10/606,557

Art Unit: 2824

only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Page 3

4. Claims 1-3, 8-10, and 18 are rejected under 35 U.S.C. 102(e) as being anticipated by Sharma et al. (US Patent 6,538,920). Sharma et al. disclose a magnetic memory element having a top portion and a bottom portion; a first write line (116) below the magnetic memory element (100a), the first write line being electrically connected with the bottom portion of the magnetic memory element; a second write line above the magnetic memory element, the second write line (118) being electrically isolated from the magnetic memory element and oriented at an angle to the first write line (see figure 4a). With respect to claim 2, Sharma et al. disclose the write lines are perpendicular to one another (see figure 4a). With respect to claims 3, Sharma et al. disclose a magnetic tunnel junction device (see figure 6). With respect to claim 8. Sharma et al. disclose the second write line further includes a central portion (19) and an edge region (17), the edge region including not facing the magnetic memory element, the edge region including a ferromagnetic cladding layer (21), thereby concentrating a magnetic field proximate to the magnetic memory element (see figure 7). With respect to claim 9. Sharma et al. disclose the ferromagnetic cladding layer (17) is electrically isolated form the central portion of the write line (11) (see figure 7). With respect to claim 10, Sharma et al. disclose the first write line includes a soft magnetic material (17). With respect to claim 11, Sharma et al. disclose the first write line is magentostatically coupled to the first memory element (see figure 7).

# Allowable Subject Matter

5. Claims 4-7, 11-17 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

6. The following is a statement of reasons for the indication of allowable subject matter: the prior art of record neither teaches nor suggests the magnetic tunneling junction having a pinned layer (claims 4-7 and 17), the first write line is multilayer structure including at least one nonmagnetic layer (claims 12 and 13), the memory having a conductive stud and is formed within a region delineated by the geometry of the stud (claim 14) the memory having a conductive stud and is formed outside a region delineated by the geometry of the stud (claim 15) the memory having a conductive stud and is formed partially within a region delineated by the geometry of the stud (claim 16).

### Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Bradley K Smith whose telephone number is (571) 272-1884. The examiner can normally be reached on 10-6 Monday through Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Richard Elms can be reached on (571) 272-1869. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
